Abstract- Receiving an education is a crucially vital part of a student's life given the current state of affairs, which makes this aspect of the student's life incredibly significant. Every single pupil has to be aware of the significance of the education that they are now obtaining. Education and the level of engagement of young people in the labour market are the two characteristics of any economy that are of the utmost importance. When compared to the academic components of other disciplines, the commercial aspects of education have a rather significant level of importance. However, students in the world of today and future confront a range of challenges, the most significant of which may be found in the field of business education. This research article does not make use of any primary sources; all of the material that it includes originated either from the internet or from other websites. As a result of my research, I was able to determine problems that are faced by students of commerce and discover a solution to a problem that is faced by these students. In addition, I was able to solve a problem that is faced by students of commerce. Students in business schools are confronted with a variety of challenges, some of which include a lack of resources and financial support, as well as limited engagement with businesses or educational institutions. Other challenges students in business schools face include limited engagement with businesses or educational institutions. [Further citation is required] Because the students and the professors welcomed new forms of technology and worked to enhance their skills, the issue was eventually resolved. This study is solely focused on the difficulties that commerce students experience with the education that they get in the field of business, and its concentration is restricted to those aspects of the subject matter. In this research paper, I'm going to discuss a topic that relates to the challenges that students who major in business have to contend with. When seeking to find a solution to an issue, what tactic is it recommended that students of business use?

Keywords: - Education, commerce sector, students, problems, skills and problems on a solution.

INTRODUCTION

Education is an extremely important factor in any field. The foundation for a student's growth and development is their educational experience. In this day and age, just like any other industry, commerce is an extremely vital industry for the growth and development of pupils. The scope of the commercial sector is significantly expanded in the educational setting. Students received the required understanding of the current situations as a result of their exposure to commerce in their schooling. However, students majoring in commerce encounter several challenges in the business world, including a shortage of resources, financing, entrepreneurial abilities, facilities, and skilled education. Students need to focus on developing their skills to be successful in the world of today and the future. Because the education system in India is so archaic in comparison to that of other countries, students of business have to contend with a great deal of difficulty. Students have access to a variety of options via the commerce education sector; yet, most commerce students are unable to make use of these changes because they lack the necessary expertise to do so. In the present climate, there are a great number of jobs made available by e-commerce; nevertheless, students are unable to fill these positions because they lack the necessary skills. In this current scenario, students majoring in commerce are provided with innovative educational policies such as student-centred methods, student-centred information, and skilled techniques.

Reviews of literature

D.S. Ranjitha (2016) notes that in their study articles, the difficulties, trends, and problems that they encountered are presented. Many issues are plaguing the field of commerce education, such as a lack of skilled workers, a dearth of necessary guidance for students, an absence of an up-to-date and industry-based curriculum, the difficulty of the subject matter, and so on. She mentioned that colleges can improve the students' knowledge through a variety of educational programmes.

D. J. Balamurugan and L. Priya Bharsini's (19 February 2017) In the study paper that they wrote, they discussed the issues that are associated with the future growth of things like creative education, training employability Skills, and information and communication technology.

Dr M.k. Ghadoliya and Shri. Kushal Das will be presenting their study paper relating to the future prospectus on the 8th of August, 2019. According to the, then, technology plays a crucial part in the education sector of the business and management field. Therefore, education in commerce has to include topics like knowledge, skills, and practises, among other things.

Lord Hanumantha and Lord Srinivas of the Rao Family (2008) According to them, the most significant challenge that the students of the business face are the quality of the higher education they get. They said that the teachers and educational institutions did not give the pupils enough information, internet access, and improved physical infrastructure. And on occasion offered seminars and research opportunities for the professional growth of instructors.

According to Devrshi Upadhyay (May – September 2016), the commerce industry is an excellent choice for those interested in receiving an education. However, students in the field of commerce sometimes have to contend with obstacles such as a dearth of appropriate infrastructure and e-merchandise, as well as a scarcity of professors who are adequately prepared in commerce. Students in this field confront these kinds of difficulties.

Objectives

- To be aware of the challenges that are confronted by students of commerce.
- helpful some ideas

Problems faced by commerce students

1) Lack of Resources:- Even though India is a developed nation, it has not been able to provide the essential infrastructural amenities that are required of students studying commerce there. Because the majority of students in India are confronted with a variety of difficulties, including limited access to learning materials, poor internet and computer facilities, inadequate competent teaching, and so on.

2) Lack of Finance: - The government of India is making significant strides in enhancing and expanding the country's commercial education system by way of several different programmes and procedures. However, the government of India continues to fall short of meeting the requirements imposed by institutions, as well as failing to provide enough financial assistance to educational institutions that focus on commerce. In a nutshell, commerce has a detrimental effect on the students' growth in India's commerce-related fields.

3) Lack of Interaction between institutions & industries:- Students suffer from a lack of practical knowledge since there is little connection between educational institutions and professional fields. They are unaware of the processes that are involved in industrial processes. It is the primary deficiency or shortcoming of the educational system in the country of India.

4) Lack of hitach classroom facility:- The many issues that arise in the classroom, including inadequate multi-media facilities, a lack of project systems,

inadequate teaching facilities, and inadequate seating arrangements, all contribute to the difficulties that the Indian commerce students face.

5) Lack of courses and Programs:- There are various commerce education courses but they still it is failed to provide real knowledge and information about the courses to the students.

6) Theoretical & syllabus oriented:- Students in the commerce education sector are only receiving knowledge that is theoretical and curriculum centred, which can only indicate that they are being taught outdated information. Because there is a lack of originality and invention in the curriculum, it does not deliver the appropriate knowledge that is connected to the market.

7) Lack of updated knowledge in faculty:- There is a lack of practical, up-to-date, or skilled understanding among commerce sector faculty members and teachers in their respective areas. Therefore, they hurt those students who are majoring in commerce.

8) Lack of eligibility: - Because commerce and management education in India is so curriculum and theory-driven, there are certain institutions there in which instructors who are not qualified to teach such subjects are in charge of those subjects anyhow.

9) Entrepreneurship training:- Training in entrepreneurship is the single most essential factor in determining factors such as inspiration, motivation, creativity, innovation, and so on. Because having an entrepreneurial skill helps Indian education graduates put their abilities to use and create employment opportunities in the society, as well as contributing to the growth and development of both the society and the nation as a whole, and because it helps generate employment opportunities for Indian education graduates.

10) Counseling:- Students need counselling since it assists them in determining their goals, professional objectives, and long-term plans for their lives. In addition to this, it helps to offer direction to the students regarding the curriculum and the courses.

Statement of Problems

Commerce students were confronted with an overwhelming amount of challenges in today's world. Because of this, the people conducting the study are curious to learn about the challenges that are experienced by students of business.

"A Study on Problems Faced by Commerce Students" is how the title of this research project is written out. The purpose of this research paper is to get an understanding of the challenges that are faced by students of business and to investigate potential solutions to these challenges.

RESEARCH METHODOLOGY

We used the secondary data for the aim of our study. The whole of our work is based on secondary data that we gathered from many sources, including articles, periodicals, journals, newspapers, and even some websites.

Data collection techniques

A secondary data method is used to perform these research papers.

Secondary Data

For this research paper, the data is collected from different kinds of sources like the internet, magazines, and some website.

FINDINGS

- There are several challenges that the students of the business face in their major. Because they do not possess enough information about business and economics education.
- To keep their pupils up to speed in the field of commerce, instructors need to continually expand their knowledge of related topics. If educators have access to adequate information, the commercial sector will experience growth.
- Education is very underdeveloped in India as a whole nation (commerce education).
- To foster the growth of students' knowledge in the field of business. They struggle with issues such as a dearth of counselling services, an absence of necessary infrastructure, and an absence of meaningful engagement between the academic community and the business world.
 - The university or other educational institution gave pupils access to digital technologies to expand their expertise. Every school that offers higher education must provide its pupils with computers and ensure that they get instruction in relevant subjects.

Suggestions

- 1) The educational establishments, such as colleges and universities, have lecturers and professors who are highly qualified to address the issue. Every educator has both theoretical and hands-on expertise on the subject of business education.

- 2) Make improvements to the facilities of the infrastructure since the students of today are members of the technological age; as a result, they are familiar with computer programmes such as tally software and have access to the internet for their personal growth. Because, if education is improved, it will trickle down into the economy, and the economy will then improve.
- 3) The majority of the students had trouble deciding what they should do with their lives in the future. To inspire students and assist them in determining their goals, professors and teachers possess superior counselling skills. Students will be able to choose their aims and goals for the future if their teachers can act as counsellors to a greater degree.
- 4) Professors at colleges and other institutions are not required to teach simply academic material; instead, they should instruct pupils on the practical aspects of their respective fields. And make sure that the pupils have access to the most recent information. To provide pupils with the most recent knowledge, instructors need to keep themselves informed about what is going to take place in the future.
- 5) To improve the students' overall capacity for learning. Educators must provide a variety of courses or seminars geared toward the growth of their pupils. And the professors of the commerce students should supply the information to the students via this seminar or programme to develop their entrepreneurial abilities.

CONCLUSIONS

In the same way as any other industry, the commerce stream is a larger stream for education. Every student should realise the importance of their education. A significant number of students choose to pursue their studies in business-related disciplines. When compared to the educational systems of other countries, ours is considered to be somewhat antiquated. As a result, students of business are confronted with a great deal of competition and difficulty. Students in the commerce sector often lack understanding of the outside world as well as market expertise. They need a significant amount of skill and information gained from practical experience from students to increase the students' capacity for learning about commerce.
